Foreword

This second edition of *Industry Profiles* presents a statistical picture of economic developments in each of 417 manufacturing industries during the years 1958-66. It is designed to provide users of industrial data with a convenient single source of comparable basic industry statistics. All data shown are based on published Bureau of the Census materials.

The volume is a by-product of the development of a computerized statistical data bank intended originally for internal use by the Business and Defense Services Administration.

Industry Profiles consists of (1) an introduction, which describes the source and organization of the data and explains the terminology used; (2) industry descriptions, which define each of the industries included; (3) the industry profiles and supplementary industry data for 1963 (tables 1 and 2); and (4) rankings of four-digit industries by size and growth (tables 3 through 6).

The Office of Industrial Analysis under Davis A. Portner was responsible for the overall planning and preparation of the volume. Narrative and statistical materials were prepared under the supervision of Thomas E. Murphy, Director, David N. Cohen, Deputy Director, and Richard W. Helmlich of the Statistical Operations and Analysis Staff, with the cooperation of the Automatic Data Processing Division under Raymond J. Long, Director.

Introduction

For each of the 417 manufacturing industries covered, *Industry Profiles* presents 16 basic data series relating to employment, payrolls, manhours, value of shipments, value added by manufacture, capital expenditures and selected averages. These series were obtained from the 1963 Census of Manufactures and the 1965 and 1966 Annual Surveys of Manufactures, published by the Bureau of the Census. Data are shown for the years 1958 through 1966.

Industry data shown refer to the four-digit industries as defined in the Bureau of the Budget's Standard Industrial Classification of 1957, as amended. For the years 1958 and 1963, industry statistics were developed from a complete census of all manufacturing establishments. Data for intervening years are based on reports from a sample of approximately 60,000 establishments. Each reporting establishment was assigned an industry code on the basis of its major product or group of products.

In this publication in some instances, it was necessary to combine industries in order to present comparable data for the entire period shown. Combined industries are identified in this volume by an "x" or "v" as the last digit of the industry code. The industries included are shown under the title for each such profile.

Though each reporting establishment is classified in an industry on the basis of its major product or activity, the industry aggregates shown reflect the total activity of the establishments so classified. The value of shipments data in this publication represent all of the shipments and receipts of the establishments classified in the specific industries, including the shipments of primary products, secondary products and miscellaneous receipts. They differ from the value of shipments on a product basis. The latter, for which data are not shown in this release, represents the total value of shipments of the specific groups of products regardless of the classification of the establishment from which they were shipped.

Specialization Ratio.—Derived by dividing the total output (both primary and secondary products) of the industry's plants into their output of products primary to the industry. The resulting percentage measures the extent to which the industry specializes in making its primary products. (Shown with industry definitions as "S-")

Coverage Ratio.—Computed by dividing the total output of products primary to an industry (wherever produced) into the output of primary products

produced within the industry. This ratio measures the extent to which the products primary to an industry are shipped by plants classified in that industry. (Shown with industry definitions as "C-")

Data for all years except the complete census years of 1958 and 1963 are based on sample surveys and are therefore subject to sampling errors. For any item in which the sampling error exceeded 15 percent, or where the data were inconsistent with other Census series and related information, the abbreviation NA (not available) is indicated.

Table 1 consists of 16 series including eight basic statistical items and eight derived ratios or averages. Each of these is defined below. The method by which the averages were computed is also described, along with certain limitations with respect to the interpretation of these derived series.

Total Employment.—All full-time and part-time employees on the payrolls of operating manufacturing establishments who worked or received pay for any part of the pay period ended nearest the 15th of selected months. Included are all persons on paid sick leave, paid holidays, and paid vacations during these pay periods. Excluded are members of the Armed Forces and pensioners carried on the active rolls but not working during the period. All plant employees including plant officials are included except proprietors and partners of unincorporated firms.

Total employment consists of an average of four monthly figures for "production workers" (March, May, August, and November) plus the March figure for "all other employees."

Production Workers.—All workers (up through the working foreman level) engaged in fabricating, processing, assembling, inspection, receiving, storage, handling, packing, warehousing, shipping (but not delivering), maintenance, repair, janitorial, watchman services, product development, auxiliary production for plants' own use (e.g., power plant), record keeping, and other services closely associated with these production operations at the establishment covered by the report. Supervisory employees above the working foreman level are excluded from this category.

All Other Employees.—Nonproduction personnel of the manufacturing establishment, including those engaged in the following activities: Factory supervision above the working foreman level, sales (including driver salesmen), sales delivery (highway truck drivers and their helpers), advertising, credit, collection, installation and servicing of own products, clerical and routine office functions, execu-

tive, purchasing, financing, legal, personnel (including cafeteria, medical, etc.); professional, and technical. Also included are employees on the payroll of the manufacturing establishment who are engaged in the construction of major additions or alterations to the plant and who are utilized as a separate work force.

Payroll.—This total represents gross wages and salaries paid in the calendar year to all employees on the payroll of operating manufacturing establishments, following the definition of payrolls used for calculating the Federal withholding tax. Included are all forms of compensation, such as salaries, wages, commissions, dismissal pay, all bonuses, vacation and sick leave pay, and compensation in kind, prior to such deductions as employees' Social Security contributions, withholding taxes, group insurance, union dues, and savings bonds. The total includes salaries of officers of these establishments, if a corporation; it excludes payments to the proprietor or partners, if an unincorporated concern. Also excluded are payments to members of the Armed Forces and pensioners carried on the active payrolls of manufacturing establishments.

Production Worker Man-Hours.—All plant man-hours of production workers as defined above, represents all man-hours worked or paid for at the plant including actual overtime hours (not straight-time equivalent hours). The total excludes hours paid for vacations, holidays, or sick leave, when the employee was not at the plant. Where employees elected to work during the vacation period, only actual hours worked by such employees were reported.

Wages.—Gross earnings paid in the calendar year to all production workers on the payrolls of operating manufacturing establishments.

Value of Shipments.—Dollar amounts of the received or receivable net selling values, f.o.b. plant, after discounts and allowances, and excluding freight charges and excise taxes. However, where the products of an industry are customarily delivered by the manufacturing establishment (e.g., bakery products, fluid milk, and soft drinks), the value of shipments is based on the delivered price of the goods.

Included in value of shipments are: All items made by or for each establishment from materials owned by it, whether sold, transferred to other plants of the same company, or shipped on consignment; receipts for contract work; and receipts for such miscellaneous activities as sale of scrap and refuse, installation work by plant employees, research and development, and repair work. The net selling value of products made in one plant on a contract basis from materials owned by others was reported by the plant providing the materials. The value of products bought and resold without further processing (merchandising) was reported separately and is included in the value of shipments totals for each industry.

For multi-unit companies, the value of products transferred to other establishments of the same company (i.e., other manufacturing plants, separate sales branches, or retail stores) was tabulated as though each establishment were a separate economic unit. Included in "value of interplant transfers within the company" are not only the direct costs of production but also a reasonable proportion of "all other costs" (including company overhead) and profit.

Value Added.—This measure is derived by subtracting the cost of materials, supplies, containers, fuel, purchased electricity, and contract work from the value of shipments of products manufactured plus receipts for services rendered. The result of this calculation is then adjusted by the addition of value added by merchandising operations (that is the difference between the sales value and cost of merchandise sold without further manufacture, processing, or assembly) plus the net change in finished goods and work-in-process inventories between the beginning and end of the year.

"Value added" avoids the duplication in the "value of shipments" figure which results from the use of products of some establishments as materials by others. Consequently, it is useful for comparing the relative economic contribution of the manufacturing process among industries and geographic areas.

Capital Expenditures.—For establishments in operation and establishments under construction but not yet in operation, these data include expenditures for (a) permanent additions and major alterations to manufacturing establishments and (b) new machinery and equipment used for replacement purposes and additions to plant capacity, if these are of the type for which depreciation accounts are ordinarily maintained.

These totals exclude that portion of expenditures for new facilities and equipment leased from non-manufacturing concerns, new facilities owned by the Federal Government but operated under contract by private companies, and plant and equipment furnished to the manufacturer by communities and organizations. Expenditures for used plant and equipment, expenditures for land, and costs of maintenance and repairs charged as current operating expense are also omitted.

Value Added as Percent of Shipments.—Computed by dividing "value of shipments" into "value added." The resulting percentage shows the contribution of an industry to its value of shipments. The complement of that percentage (100.0 minus the percentage), which is not shown, would be an approximation of the importance of the cost of materials of the industry.

Payroll per Employee.—Computed by dividing "total employment" into "payroll." The resulting dollar figure is a measure of the average annual payroll of employees in an industry. It should be noted that "payroll" is an actual record of the amount of money paid to employees in a given year,

while "total employment" is an estimate based on four months' data for that year.

Wages per Production Worker.—Computed by dividing "production workers" into "wages." It is a measure of the annual wages of wage earners in an industry. As in the case of "payroll per employee," it should be noted that the dollar figure for "wages" is an actual record of amount paid, while "production workers" is estimated by averaging data for four months of the year.

Value of Shipments per Production Worker.—Computed by dividing "production workers" into "value of shipments." It is important to note that the "value of shipments" may be affected by several factors, such as cost of materials and the importance of receipts and payments for contract work, which have little or no relationship to the number of production workers.

Value Added per Production Worker.—Computed by dividing "production workers" into "value added." Since there are fewer factors in "value added" than in "value of shipments" that are unrelated to the number of production workers, this measure permits comparisons among industries, areas, and establishments.

Value Added per Dollar of Wages.—Computed by dividing "wages" into "value added." The resulting ratio measures the relative importance of "wages" to other components of "value added."

Wages per Production Worker Man-Hour.—Computed by dividing "man-hours" into "wages." The resulting dollar figure is a rough measure of average hourly earnings. It is not a measure of the wage rate since "wages" includes premium pay-

ments for overtime as well as vacation and sick leave pay, bonuses, etc.

Annual Man-Hours per Production Worker.—Computed by dividing "production workers" into "man-hours."

Table 2 shows the number of companies and the number of establishments, total and with 20 or more employees, for the year 1963 for each industry. These data, were compiled from the 1963 Census of Manufactures volumes.

Tables 3 through 6 present rankings of four-digit industries. Tables 3 and 4, respectively, show the 50 largest industries in terms of size of shipments and employment in 1966, and Tables 5 and 6, respectively, show the 50 fastest growth industries in shipments and employment between 1958 and 1966.

The value of shipments used in Table 5 for computing growth ratios between 1958 and 1966 is not adjusted for changes in price or product mix. Industries that have experienced decreases or rapid increases in prices during this period may be substantially under- or over-stated in terms of their growth relative to other industries. Also, data for industries that have undergone substantial changes in product mix due to technological changes, materials substitution or similar factors, may be somewhat distorted.

Another factor affecting the growth ratios computed in Tables 5 and 6 arises from the fact that the 1966 data are estimates based on a sample and therefore, have standard errors associated with them. Thus, the 1966 data when compared with 1958 will include some change reflecting the variability due to sampling.

20 FOOD AND KINDRED PRODUCTS

This major group includes establishments manufacturing foods and beverages for human consumption, and certain related products, such as manufactured ice, chewing gum, vegetable and animal fats and oils, and prepared feeds for animals and fowls.

201 MEAT PRODUCTS:

2011 Meat Packing Plants (S-98; C-86).—Establishments primarily engaged in the slaughtering, for their own account or on a contract basis for the trade, of cattle, hogs, sheep, lambs, calves, horses, and other animals except small game, for meat to be sold or to be used on the same premises in canning and curing, and in making sausage, lard, and other products. Establishments primarily engaged in manufacturing sausages and meat specialties from purchased meats are classified in industry 2013; and establishments primarily engaged in killing, dressing, packing, and canning poultry, rabbits, and other small game in industry 2015.

Some slaughtering operations are conducted in establishments which are not included in the census of manufactures, such as those chiefly engaged in wholesale or retail trade, locker plant services, etc. A check of the 1958 Census of Manufactures records with those of the U.S. Department of Agriculture indicated that the census of manufactures included about 90 percent of the volume of commercial livestock slaughter. A similar comparison of the 1963 census slaughter statistics with those of the U.S.D.A. indicates that coverage of commercial slaughter is about at the same level.

2013 Sausages and Other Prepared Meat Products (S-94; C-38).—Establishments primarily engaged in manufacturing sausages, cured meats, smoked meats, canned meats, frozen meats, other prepared meats, and meat specialties, from purchased carcasses and other materials. Sausage kitchens and other prepared meat plants operated by packing houses as separate establishments also are included in this industry. Establishments primarily engaged in killing, dressing, and packing poultry, rabbits, and other small game, and those canning poultry are classified in industry 2015. 2015 Poultry and Small Game Dressing and Packing, Wholesale (S-98; C-98).—Establishments primarily engaged in killing, dressing, packing, and canning poultry, rabbits, and other small game for their own account or on a contract basis for the trade. This industry also includes the drying, freezing, and breaking of eggs; but not the cleaning, oil treating, packing and grading of eggs which are classified in wholesale trade.

Poultry and small game killed and dressed at farms, hatcheries, frozen food lockers and wholesale and retail establishments are not included in manufacturing.

Establishments primarily freezing meats and poultry are included in industry group 201, Meat Products.

204 GRAIN MILL PRODUCTS:—Establishments in this group of industries frequently supplement their manufacturing activities with sales of grain and of commodities produced elsewhere. Such establishments were classified in manufacturing if at least 25

- percent of their total receipts were from manufacturing activities, except for Industry 2042, Prepared Feeds for Animals and Fowls, where it was required that receipts from manufacturing exceed receipts from merchandising. Most establishments which mixed some feed but did not meet these criteria were included in the 1963 Census of Business, except for some whose principal activity (e.g. custom milling) fell outside the scope of any of the 1963 economic censuses.
- 2041 **Flour and Other Grain Mill Products (S-94; C-78).**—This industry comprises establishments primarily engaged in milling flour or meal from grain, except rice (Industry 2044). Important products of this industry include phosphated and self-rising flour and prepared flour mixes such as biscuit, cake, doughnut, and pancake mixes. Establishments making the same products from flour milled at the same location are classified in Industry 2041. Prior to 1963, refrigerated doughs were not specifically listed on the report forms. The products usually were classified in either Industry 2037, or Industry 2099, depending upon the description of the refrigerated dough furnished by respondent.

This classification makes no distinction between the two types of organizations which operate in the textile industry: (1) the "integrated" mill which purchases materials, produces textiles and related articles within the establishment, and sells the finished products; and (2) the "contract" or "commission" mill which processes materials owned by others. Converters or other non-manufacturing establishments which assign materials to contract mills for processing (other than knitting) are classified in non-manufacturing industries; establishments which assign yarns to outside contractors or commission knitters for the production of knit products are classified in Industry Group 225.

Covered in the apparel industries are three types of establishments: (1) the "regular" or inside factories; (2) contract factories; and (3) apparel jobbers. The "regular" factories perform all of the usual manufacturing functions on materials owned by themselves within their own plants; the contract factories manufacture apparel, on a contract or commission basis, on materials supplied to them by others; and apparel jobbers perform only entrepreneurial functions of a manufacturing establishment such as the purchase of raw materials for their own account, the design and preparation of samples, arrangement with outside factories (contractors) for the manufacture of garments from materials supplied by such jobbers, and the sale of finished apparel.

Custom tailors and dressmakers not operating on a factory basis are classified in nonmanufacturing industries. Establishments which primarily purchase and resell finished garments but

do not perform the functions of apparel jobbers or manufacturers are classified in the wholesale trades.

The major group also includes manufacturers of fabricated textile products (other than apparel) from purchased fabrics, typically by cutting and sewing or the performance of sewing and related services on textile and similar materials for the trade.

This major group includes the manufacture of pulps from wood and other cellulose fibers, and rags; the manufacture of paper and paperboard; and the manufacture of paper and paperboard into converted products such as paper coated off the paper machine, paper bags, paper boxes, and envelopes. Certain types of converted paper products are classified elsewhere, such as abrasive paper in industry 3291; carbon paper in industry 3955, and photosensitized and blueprint paper in industry 3861.

261 PULP MILLS:

Logging camps operated by pulp mills, and not separately reported, are also included in this industry. Establishments primarily engaged in cutting pulpwood are classified in industry 2411; and pulp mills combined with paper mills or paperboard mills, and not separately reported, are classified with the latter in industries 2621 and 2631, respectively.

In both the 1963 and 1958 Censuses of Manufactures, pulp mills operated in conjunction with a paper and board mill at the same location were permitted to file a combined report for such integrated operations. However, in 1954 all pulp mill activity was separately reported whether or not such pulp mill operations were conducted at the same physical location as an associated paper or board mill. This change in treatment has the effect of restricting the reporting of a "pulp mill" for classification in industry 2611 in both the 1963 and 1958 censuses to the following situations: (a) those pulp mills which are not affiliated with any paper and board mills and ship all their products to the market; (b) pulp mills affiliated or associated with a primary paper or board mill but which are separately located from the pulp mill; and (c) a few pulp mills affiliated or associated with a primary paper or board mill at the same physical location, where separate departmental records of employment, materials, and fuel costs, shipments, etc., are maintained for the pulp mill from those covering the paper or board mill at that location and the company elected to file such a separate report.

265 PAPERBOARD CONTAINERS AND BOXES:—There is a high degree of integration between industry 2631, and the various board converting industries, except industries 2652 and 2655, which rely principally on market purchases of paperboard. In industries 2651, 2653, and 2654, a substantial part of the converted paperboard is manufactured and converted by the same company, either at the same location or at separate locations.

Pulp mills combined with building paper and building board mills, and not separately reported, are also included in this industry; where separately reported, they are classified in industry 2611. As noted previously in connection with industry 2611, same physical location as paper or board were not required in either the 1963 or the 1958 Census of Manufactures to submit a separate report for the pulp mill operations. This reporting requirement had less effect on the general statistics of mills primarily engaged in producing building paper and board than on those producing paperboard and paper, except building paper.

The code number for this industry in the Standard Industrial Classification Manual is unchanged, but the content of the industry has been slightly changed from the classification system used in 1958. The composition of the industry as now constituted, compared with that under the classification system followed in the 1958 census is due principally to (1) the reclassification of exfoliated vermiculite from industry 3296 to industry 3295 and (2) the inclusion of roofing granules produced in conjunction with mining operations in the mineral industries for 1963. In prior years these roofing granule plants were included in industry 3295.

Those primarily engaged in manufacturing iron and steel castings are classified in Industry Group 322.
- For these industries, captive production (that is, the tonnage of castings produced for incorporation into the final product of the plant or company) is a particularly important factor. Distinction is made between rough castings and castings which are machined or further processed and incorporated into other products. The removal of gates, risers, sprues, and tumbling, dipping, and sand blasting do not constitute machining. Plants primarily engaged in manufacturing castings are included in the foundry industries; plants primarily engaged in further processing castings into parts for metal products or machinery are classified in other major groups.
- For the 1963 and 1958 Censuses of Manufactures separate establishment reports were received from all commercial (jobbing) foundries and from those captive foundries which were operated as separate establishments by the reporting companies. These two groups comprise the types of establishments included in industries 3361, 3362, and 3369. However, where the captive foundry operation was completely integrated with the operations of the entire plant, no separate establishment report was received

- for the foundry activity. In these instances data were obtained on the tonnage of castings produced and consumed and on the number of employees usually engaged in the captive foundry operation. However, establishments with such foundry departments were classified on the basis of the plant's final product and accordingly, the general statistics on employment, payroll, cost of materials, etc., are included in the data for such industries as 3432 and 3494, etc.

- This industry includes establishments which fall into two significantly different categories, namely those producing cast iron plumbing fixtures and those producing metal fixtures of pressed metal. Accordingly, the manufacturing plants included in this industry involve different manufacturing processes depending upon the line of products produced. Those fixture plants producing cast iron fixtures include significant foundry operations while the pressed metal fixture plants are more closely allied to metal fabricating plants producing their product by forming processes (stamping, drawing, etc.).
- The operations of the largest establishments in this industry cover the entire production process including the casting of the fixture through the machining, finishing, and assembly operations. In general these processes are carried on at a single manufacturing plant. However, in a few instances the foundry operations were performed at separate locations and, accordingly, those separate foundries were classified in the foundry industries (SIC industries 3321, 3322, 3323, 3361, 3362 and 3369). In the latter case the plants classified in this industry would be limited to machining and finishing operations on castings received from their associated plants.

(NA) Not available.
D Withheld to avoid disclosing figures for individual companies.

¹Percentages are based on figures containing significant duplication.

²This ratio results from inclusion of finished cotton broad woven fabrics (except commission finishing) which are also primary to Industry 2211. A coverage ratio computed on the basis of including both industries to which finished synthetic broad woven fabrics are primary would come to 77 percent.

³This ratio results from inclusion of finished broad woven synthetic fabrics (except commission finishing) which are also primary to Industry 2221. A coverage ratio computed on the basis of including both industries to which finished synthetic broad woven fabrics are primary would come to 77 percent.

¹¹This is a minimum percentage. The exact percentage cannot be shown without disclosing figures for individual companies.

¹²The value of shipments for this industry includes duplication of the products of some establishments are used as materials by others. Specialization ratio computed on the basis of net value of shipments would approximate 94 percent. A coverage ratio for this industry cannot be precisely computed. However, such a ratio would exceed 86 percent.

¹³Includes small amount of primary products made in other industries to avoid disclosing figures for individual companies. This amount, however, constitutes less than 2 percent of the total.

¹⁴Ratios have not been calculated because the shipments of primary products contain extensive duplication.
